### QED man : Da Vinci Water

#### What is it?

A calming and soothing toner and skin refresher to use after shaving or whenever the skin needs a little pick-me-up. Good for all skin types.

#### How to use?

**AS A TONER:** Toning is the act of giving the face a final cleansing to remove shaving cream residue as well as dirt and excess sebum. After shaving, and after thoroughly rinsing your face with cool water and pat drying, moisten a cotton ball with *Da Vinci Water*. Then rub the entire face and neck – not just the portion you've shaved - with the cotton ball. Leave the toner on your skin to air dry. You will note your skin feels refreshed and clean. Skin is naturally acidic, shave creams tend to be alkaline, so it's a good idea to use *Da Vinci Water* after shaving in order to balance out the pH level. At this point you can apply either an after shave balm or a moisturizer if you feel your skin needs additional help.

**AS A SKIN REFRESHER:** After toning, spray some *Da Vinci Water* on your face and neck as an added treat for the skin. With the second application, especially during the summer (when the oil glands are more active), you may discover you do not need to moisturize. In addition, spray *Da Vinci Water* on your face any time during the day you feel your skin needs a little refreshing. As a bonus, the natural scent lifts the spirits. Keep in mind *Da Vinci Water* is not an intensive moisturizer but a skin refresher with very light moisturizing properties. Refrigerate for cool and invigorating relief.

**AS AN AFTER SHAVE SPLASH:** After shaving, simply splash some *Da Vinci Water* on your face and neck with your hands. A quick and easy way to soothe and slightly moisturize the skin. But remember, *Da Vinci Water* is not a cologne, but a skin refresher.

#### What's in it (ingredients)?

A simple, yet well-balanced, formulation of organic rosewater (*rosa damascena*) and organic lavender hydrosol (*lavendula angustifolia*) ... NOTHING else! These ingredients are imported from reputable sources insuring top quality.

#### Why the name Da Vinci Water?

It has been said Leonard Da Vinci, the Italian genius who, among his many talents, was a botanist, immensely enjoyed a mixture of rose and lavender to stimulate his mental processes and to restore and refresh his body and his spirit.

#### How are these ingredients produced?

Hydrosols are produced from steam distilling plant materials. Usually hydrosols are the by-product of essential oil distillation, but the highest quality come from the distillers who steam the floral and plant material only to produce hydrosols. Pristine well water and organically-grown, freshly-harvested plants are transformed into aromatic waters with therapeutic qualities. Expert attention is given to plant selection, harvest time, proper pH, distillation time and temperature, guaranteeing the finest quality and standardized high concentration. Hydrosols contain all of the essence of the plant in every drop, just like essential oils but in a milder form ... making them suitable for applications where essential oils would be too strong.
